THERMOPLASTIC CLOSE COUPLED PUMP ECO with mechanical seal

OVERVIEW

The centrifugal pumps of the ECO range are designed for pumping corrosive fluids. They are equipped with mechanical seal specially designed for the highest industrial and technological requirements.

ADVANTAGES

- ISO 9906 tested with test report
- Flanges: ISO PN 16 or ANSI B16.5
- Designed to resist to the most corrosive atmospheres
- Simple but robust design for the easiest maintenance
- 10 years old pumps still running

APPLICATIONS

- Odor control / Gas scrubber
- Waste water treatment
- Sea water for aquariums
- Highly concentrated acids

RAW MATERIALS

All wetted parts are machined from solid blocks of plastic for the ultimate in robust construction. No metallic component is in contact with the pumped fluid.

WETTED PARTS	O-RINGS	SEALS
PP / PP-EL	EPDM	SiC / SiC
PVC	FKM	SiC / C
PVDF / PVDF-EL		

ATEX STANDARDS

The ECO range is available for ATEX explosion-proof atmospheres:

- Plastics mixed with carbon to conduct static electricity, like PP-EL (polypropylene electro-conductive)
- Ex II 2/3 G/GD c IIB/IIC T4 (others upon request)
- Voluntary certification INERIS (Public French Certification Organization)

PERFORMANCES

Available in 50Hz or 60Hz:

- Flow rates up to 350 m³/h (1550 GPM) at 50Hz
- Total differential head up to 70 mlc (230 ft) at 50Hz
- Temperature range from -20°C to 90°C (0°F to 200°F)

DIAGRAMS

1 Thermoplastic raw material:

- All wetted parts are machined from solid blocks of plastic for the ultimate in robust construction, with a casing thickness up to 70 mm
- No metallic component is in contact with the pumped fluid

2 Impeller wetted part moulded over a steel insert, by our own moulding department:

- Mechanical resistance of the metal
- Corrosion resistance of the thermoplastic

3 The impeller is maintained by the pump rear:

- No leakage at the pump nose
- Impossible to unscrew the impeller, in case of reverse running

4 Coupling made in 2 parts:

- Very easy dismantling even in corrosive atmosphere

5 No alignment necessary:

- Directly coupled to the standard motor shaft

6 Spare parts reduction:

- Identical mechanical seal for the whole ECO range

7 Standard seal:

- No adjustment
- Easy dismantling and reassembly

7a Different mechanical seal option:

- Flushing
- Standstill flushing
- Grease filling
- Outside flushing

FLUSHING

In case of particles and so abrasion, clean water is flushed to the seal friction faces. The impeller is specially designed to minimize the flushing of clean water inside the process fluid. The mechanical seal is lubricated with only one water inlet.

STANDSTILL FLUSHING

In case of crystallization or solids deposit, the mechanical seal is flushed with clean water every time the pump is stopped, to protect the seal friction faces (maximum pressure 3 bar for some minutes).

GREASE FILLING

In case of crystallization and if water can't be flushed inside the cartridge, this one can be filled up with grease. An input of lubricant (40 g) every 4000 hours is sufficient to maintain the efficiency of the grease filling. We can also install an automatic greaser.

OUTSIDE FLUSHING

In case of crystallization and if the pump is running 24/7, the mechanical seal is flushed from outside with clean water to remove all the crystal (once a week 0.2 bar for 10 minutes).
